

Cultural Tips For The Successful Grower

Black Satin

Thornless Black Satin: Released on the East Coast; USDA tested. Large, firm, glossy black berries. Sweet flavor and excellent quality for jams, jellies, fresh eating and pastries. Heavy yields, semi erect, thornless vines that does not give rise to the occasional sticky cane like so many of the other thornless blackberry types. Highly resistant to Septoria Leaf Spot and Anthracnose. Also mildew tolerant. Excellent in the Pacific Northwest. Winter hardy in the Midwest and South. Ripens in July. Hardy to approximately -15 degrees F. and in zones 5-9.

Planting Instructions: One year old tip plants should be planted in March or April. Two year old transplants may be planted earlier, one inch deeper than the plant grew in the nursery. Any white sprouts arising from the crown should be covered with soil to prevent burning by the sun. The older stems or tops on transplants may be cut back several inches. Blackberries should be spaced 4-6 feet in the row and 6-8 feet between rows, depending on equipment.

Variety	Zone	Season	Size	Flavor	Classification	Exposure	Spacing
Black Satin	5-9 	 July	 Large	Sweet	Semi-Upright Thornless Blackberry	Full Sun 	4-6' in row
