

Cultural Tips For The Successful Grower

Boysenberry

Boysenberry: The Boysen originated in California and introduced in 1923. Very large, non-shiny, dark maroon berries. Soft, very juicy flesh. The Boysen has a distinctive, rich, tangy flavor and very aromatic. Excellent for eating fresh, juice, freezing, canning, pastries, and preserves. Ripens about July 1, and are among the largest of the small fruits. Vigorous, trailing vines. Boysenberries are hardy to approximately -10 degrees F. without protection. Hardy in zones 6-9.

Planting Instructions: One year old tip plants should be planted in March or April. Two year old transplants may be planted earlier, one inch deeper than the plant grew in the nursery. Any white sprouts arising from the crown should be covered with soil to prevent burning by the sun. The older stems or tops on transplants may be cut back several inches. Blackberries should be spaced 4-6 feet in the row and 6-8 feet between rows, depending on equipment.

Variety	Zone	Season	Size	Flavor	Classification	Exposure	Spacing
Boysenberry	6-9 	 ↑ Late June-July	 Extremely Large	Rich, Tangy	Trailing Blackberry	Full Sun 	4-6' in row
