

Cultural Tips For The Successful Grower Campbell Early

Campbell's Early: Large clusters of dark, purple to black slipskin fruit. Campbell's Early is a high quality grape but lacks foxy taste. Excellent for fresh eating and juice. The vines are moderately vigorous and moderately susceptible to Powdery Mildew. Campbell's Early will resist Downy Mildew. Be sure to give this variety time to ripen because it will reach full color before it reaches full sweetness. Ripens 10-20 days before Concord. Fruit will hang well without shattering. Needs good fertile soil. Excellent early Concord type. Zone 5-8

Planting Instructions: Grapes prefer a light soil with good drainage and moderate to high fertility. Soil should be kept moist the first year after planting, but the grapes will stand short dry periods in following years. A spring application of fertilizer (a balanced blend) is recommended. Plant grapes in early spring, pruning back top growth to two or three buds at planting time. Prune roots to avoid wadding of roots in planting hole. Grapes should be planted one inch deeper than plants grew in the nursery, and spaced eight feet APART for maximum performance.

Variety	Zone	Season	Size	Classification	Exposure	Flavor	Spacing
Campbell Early	5-8 	 ↑ Early	 Large	Seeded	Full Sun 	Sweet, Foxy Flavor	8-10 feet
