

## Cultural Tips For The Successful Grower Jubilee

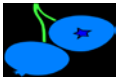

**Jubilee** - Midseason. Growing conditions can be tough in Mississippi. Jubilee has distinguished itself as one of the toughest, performing well in heavier soils through summer heat and sudden winter cold. We especially like the upright, compact bush and the easy-picking bountiful crops of sky-blue berries presented over the outer periphery of the bush. Jubilee berries are medium sized and especially tasty, growing in large clusters that ripen over a two week period. Fall foliage is yellow orange. Jubilee is recommended throughout the South and in California in areas that receive at least 500 chilling hours.

### Planting Instructions: Highbush

Start with selecting a sunny location in well drained soil free of weeds and well worked. Locate in an area where irrigation water is available as best results will be obtained by keeping the root zone moist throughout the growing season. Where the soil is poor or marginally drained, raised beds 3-4 feet wide and 8-12" high work very well for blueberries. Blueberries can be planted as close as 2-1/2 feet apart to form solid hedgerows or spaced up to 6 feet apart and grown as individual specimens. If planted in rows, allow 8-10 feet between the rows depending on equipment used for mowing or cultivating.

**Mulching** - Blueberries do best with a 2-4" mulch over the roots to conserve moisture, prevent weeds and add organic matter. Bark mulch, sawdust, grass clippings, etc. all work well. Repeat every other year.

Variety	Zone	Season	Size	Classification	Exposure	Flavor	Spacing
Jubilee	5-9 	 Midseason	 Medium	Southern Highbush	Full Sun 	Sweet	6 Feet
