

Cultural Tips For The Successful Grower Lakemont

Lakemont: Introduced from the Geneva Station in 1972. American; Seedless. Very large tight cluster of crisp, sweet and juicy yellowish green berries. Excellent flavor and quality. Excellent for table grapes and raisins. Vigorous and productive vines. May tend to over bear. Ripens in late August to early September, about 10 to 20 days before Concord. Hardy to approximately -10 degrees F. Zone 5-8

Planting Instructions: Grapes prefer a light soil with good drainage and moderate to high fertility. Soil should be kept moist the first year after planting, but the grapes will stand short dry periods in following years. A spring application of fertilizer (a balanced blend) is recommended. Plant grapes in early spring, pruning back top growth to two or three buds at planting time. Prune roots to avoid wadding of roots in planting hole. Grapes should be planted one inch deeper than plants grew in the nursery, and spaced eight feet APART for maximum performance.

Variety	Zone	Season	Size	Classification	Exposure	Flavor	Spacing
Lakemont	5-8 	 Late August	 Large	Seedless	Full Sun 	Crisp, Juicy, Sweet	8-10 feet
