

Cultural Tips For The Successful Grower San Andreas

San Andreas- San Andreas is a moderate day-neutral with a production pattern very similar to Albion. Plant vigor for San andreas is somewhat higher than for Albion early in the season but plant size throughout the fruiting season is similar to Albion due to its high and consistent productivity. This cultivar produces few runners in the fruiting field. The fruit for San Andreas is exceptional in appearance and especially superior to Albion early in the season. The fruit color for San Andreas fruit is slightly lighter than for Albion, and it has similar post harvest characteristics. The flavor of San Andreas is outstanding, very similar to that for Albion. San Andreas has a good disease resistance profile with no outstanding cautions. Its typically high quality fruit early in the season, together with a low chilling requirement, make this a good candidate cultivar for southern California.

Planting Instructions: - In the home garden strawberries make an excellent ground cover. No soil preparation is necessary if the flower bed is mulched with bark dust, saw dust, etc. Simply dig the plant in leaving the crown exposed at ground level. Never plant strawberries to a depth where the crown is buried. Avoid wadding the roots in the planting hole.

Variety	Zone	Season	Size	Classification	Exposure	Flavor	Spacing
San Andreas	3-9 	 ↑ June-September	 Large	Everbearing Strawberry	Full Sun 	Exceptional	1 Foot Apart In Rows
