

Cultural Tips For The Successful Grower Shuksan

Shuksan - A Washington Release. Large and glossy bright red fruit with slightly indented yellowish red seeds. Medium firm meaty flesh with good flavor. Good for fresh eating and excellent for freezing. The plant is large and very vigorous. Also produces runners freely. Shuksan is winter hardy and tolerates Alkaline soils better than any other variety. We recommend this variety for colder areas of the Pacific Northwest above all other varieties. Shuksan is good news for Idaho, Colorado, Utah, etc.. Totem is winter hardy also, but Shuksan blooms a little later, thus protecting the fruit from late frosts. Virus tolerant and Red Stele resistant. Does not demand perfect drainage.

Planting Instructions: - In the home garden strawberries make an excellent ground cover. No soil preparation is necessary if the flower bed is mulched with bark dust, saw dust, etc. Simply dig the plant in leaving the crown exposed at ground level. Never plant strawberries to a depth where the crown is buried. Avoid wadding the roots in the planting hole.

Variety	Zone	Season	Size	Classification	Exposure	Flavor	Spacing
Shuksan	4-9 	 June-July	 Medium	Spring Crop Strawberry	Full Sun 	Good Flavor	1 Foot Apart In Rows
