

## Cultural Tips For The Successful Grower Stueben

**Stueben:** Introduced by the Geneva Station, New York in 1947. American. Very large, nicely formed, long and slender compact clusters. Blue to purplish black grapes. Delicious tender sweet flesh with a distinctive spicy flavor. Very good table grape and makes an excellent red wine. Vigorous, hardy, and very productive vines. Resistant to Black Rot and Downy Mildew. Ripens in mid September, a few days before Concord. Zone 4-8

**Planting Instructions:** Grapes prefer a light soil with good drainage and moderate to high fertility. Soil should be kept moist the first year after planting, but the grapes will stand short dry periods in following years. A spring application of fertilizer (a balanced blend) is recommended. Plant grapes in early spring, pruning back top growth to two or three buds at planting time. Prune roots to avoid wadding of roots in planting hole. Grapes should be planted one inch deeper than plants grew in the nursery, and spaced eight feet APART for maximum performance.

Variety	Zone	Season	Size	Classification	Exposure	Flavor	Spacing
Stueben	4-8 	 ↑ mid September	 Very Large	Seeded	Full Sun 	Distinctive Spicy	8-10 feet
