

Cultural Tips For The Successful Grower

Sylvan

Sylvan: 1984 release from Australia, but it's parents are from the Pacific Northwest, is the result of a cross between Marion and a Boysenberry hybrid. Large, shiny, black fruit. Mild, very sweet flavor. Vigorous, highly productive, thorny, trailing vines. Resistant to disease and rot. Has Excellent tolerance for heavy soils, wind and drought. This variety fruits one week earlier than Kotata and is more upright than Marion. Fruit flavor is excellent. Zone 6-9

Planting Instructions: One year old tip plants should be planted in March or April. Two year old transplants may be planted earlier, one inch deeper than the plant grew in the nursery. Any white sprouts arising from the crown should be covered with soil to prevent burning by the sun. The older stems or tops on transplants may be cut back several inches. Blackberries should be spaced 4-6 feet in the row and 6-8 feet between rows, depending on equipment.

Variety	Zone	Season	Size	Flavor	Classification	Exposure	Spacing
Sylvan	6-9 	 July	 Large	Mild, Very Sweet	Trailing Blackberry	Full Sun 	4-6' in row
