

Cultural Tips For The Successful Grower

Thornless Logan

Thornless Loganberry: Originating in California, the Logan is thought to be a natural cross between a California native blackberry and a red raspberry. The berries are long, large, dark red, acid, and highly flavored. The Logan is often used for pies, juice and wine. Not as widely grown commercially as it once was. There is high demand for it in the home garden due to its desirable flavor. Thornless canes; average yields. Hardiness is similar to Boysen. Zone 5-9

Planting Instructions: One year old tip plants should be planted in March or April. Two year old transplants may be planted earlier, one inch deeper than the plant grew in the nursery. Any white sprouts arising from the crown should be covered with soil to prevent burning by the sun. The older stems or tops on transplants may be cut back several inches. Blackberries should be spaced 4-6 feet in the row and 6-8 feet between rows, depending on equipment.

Variety	Zone	Season	Size	Flavor	Classification	Exposure	Spacing
Thornless Logan	5-9 	 ↑ July	 Medium to Large	Unique, Tart	Trailing Thornless Blackberry	Full Sun 	4-6' in row
