

**Cultural Tips For The Successful Grower  
President Van Buren**

**President Van Buren:** Introduced by New York State Agricultural Experiment Station in 1935. Small to medium well filled clusters with medium size berry. This variety has jet black skin and juicy flesh with a sweet, foxy flavor. Good table quality but poor keeping quality. Ripens early. Fairly vigorous, hardy, moderately productive vines. Susceptible to Downy Mildew. Zone 5-8

**Planting Instructions:** Grapes prefer a light soil with good drainage and moderate to high fertility. Soil should be kept moist the first year after planting, but the grapes will stand short dry periods in following years. A spring application of fertilizer (a balanced blend) is recommended. Plant grapes in early spring, pruning back top growth to two or three buds at planting time. Prune roots to avoid wadding of roots in planting hole. Grapes should be planted one inch deeper than plants grew in the nursery, and spaced eight feet APART for maximum performance.

Variety	Zone	Season	Size	Classification	Exposure	Flavor	Spacing
President Van Buren	5-8 	 Early	 Medium	Seeded	Full Sun 	Sweet, Fine	8-10 feet
