

**Cultural Tips For The Successful Grower**

**Olallie**

**Olallie:** Developed in Oregon, but produces extremely well in California where the lack of day length and cold limit the productivity of some blackberries. Large, shiny, firm black berries. Sweet with some wild blackberry flavor. Vigorous and productive trailing thorny canes. Ripens in July. Good for fresh eating, jams and freezing. Zone 6-9

**Planting Instructions:** One year old tip plants should be planted in March or April. Two year old transplants may be planted earlier, one inch deeper than the plant grew in the nursery. Any white sprouts arising from the crown should be covered with soil to prevent burning by the sun. The older stems or tops on transplants may be cut back several inches. Blackberries should be spaced 4-6 feet in the row and 6-8 feet between rows, depending on equipment

Variety	Zone	Season	Size	Flavor	Classification	Exposure	Spacing
Olallie	5-8 	 ↑ Early-Mid	 Large	Sweet	Trailing Blackberry	Full Sun 	4-6' in row
